## GROUND CONTAMINATION SEEKER

**SYSCAN** is an electric compact vehicle ideal for ground contamination measurement and more particularly to look for the presence of Cesium-137 and Cobalt-60.

It has been specially designed to be used very easily by a single operator with limited training.

**SYSCAN** can be rented as a service or purchased.

## APPLICATIONS

- Inspection of nuclear sites for the detection of soil contamination
- Reassurance surveys
- Site clearance
- Ground inspection in case of emergency situations
- Soil characterization and remediation

## ADVANTAGES

- Detection and localization of hot spots in potentially contaminated areas
- Very low MDA : can detect 1 kBq of Cs-137
- Display with color codes in the cabin and sound alarms
- Long autonomy and great handiness
- Retractable detector for minimal bulk
- Automatic data recording with accurate localization of hot spots (GPS option)
